Chapter 18

Business cycles and the entrepreneur

Van Aardt | Bezuidenhout
Bendeman | Boysen | Clarence | Massyn
Moos | Naidoo | Swanepoel | Van Aardt
Learning outcomes

• Explain what business cycles are
• Describe the four distinguishable phases of the business cycle
• Provide a historical perspective on business cycles in South Africa
• Provide a sectoral perspective on business cycles in South Africa using financial data from different business sectors and industries
• Indicate the relevance of business cycles to entrepreneurs and prospective entrepreneurs
Learning outcomes (cont.)

• Describe how entrepreneurs can ensure profitability during the different phases of the business cycles
• Show how entrepreneurs can incorporate business cycle forecasts in their business plans
• Describe how entrepreneurs can make use of sectoral business cycles to optimise their business success in the sector they are operating in
• Identify business opportunities using business cycle information
Introduction

- No economy in the world is static
- To ensure business success entrepreneurs should scan economic trends continuously and should respond to changes in the economy
- Entrepreneurs should use their knowledge regarding economic trends in their business plans, in identifying business opportunities, in identifying markets and products for their services, in conducting market planning, in deciding upon expanding their business, in making decisions about new outlets and in calculating business risks
Nature and phases of business cycles

**Business Cycle**: the cyclical but irregular up-and-down movements in economic activity, which are measured by fluctuations in GDP.

**Phases:**

- **Contraction**: this occurs when an economy is experiencing negative real growth in its gross domestic product (GDP)
- **Recovery**: This occurs when an economy starts to show positive real GDP growth again after a recession
Nature and phases of business cycles (cont.)

- **Peak**: This is the ‘happy days’ part of the business cycle during which fairly high real GDP growth rates, sustained positive employment growth rates and fairly high levels of consumer and business confidence are experienced.

- **Slump**: This phase of the business cycle follows the boom phase when real GDP and employment growth rates start to decline.
The business cycle

- Contraction
- Slump
- Recovery
- Peak
Average GDP growth rates in SA

- 5.8% during 1961 to 1969
- 3.3% during 1970 to 1979
- 2.2% during 1980 to 1989
- 1.5% during 1990 to 1999
- 3.7% during 2000 to 2009
- 2.8% during 2010 to 2013
- It is evident from the growth rates above that there are also longer term business cycles present in the economy

Relevance of business cycles to the entrepreneur

- An in-depth knowledge of business cycles is important to entrepreneurs. Failing to base business decisions on business cycles often have disastrous consequences for entrepreneurs.
- The quantity of goods and services demanded differ during different states of the business cycle.
- The nature of goods and services demanded differ during different phases of the business cycle.
- The quality of goods and services demanded differ during different phases of the business cycle.
- There are always business opportunities but they differ during different phases of the business cycle.

Reasons to incorporate business cycle forecasts in business plans

- **To anticipate changes in demand and supply of goods and services.** This is required to ensure that the entrepreneur is not caught unprepared for changes in the business cycle.

- **To realign capital overheads in such a way that scarcer capital resources could be used in such a way that the business survives while creditors are paid.** During times of economic contraction, entrepreneurs need to decide whether they cut back on capital spending or increase it to gain first mover advantage during the upturn that will follow.
Reasons to incorporate business cycle forecasts in business plans (cont.)

- **To make important inventory decisions.** Entrepreneurs can make use of business cycle forecasts to decide whether they should add to inventory or cut back on it.

- **To decide on the welfare of human resources in the face of a looming contraction.** Because skilled human resources is the biggest asset of a business it will not be wise for entrepreneurs to shed a large number of workers to cut costs during a recession. Having a substantial pool of skilled human resources will be vital to ensure business success during the following upswing in economic activity.
